

CORPORATECONNECT LIGHT

REACH YOUR REMOTE OFFICES WITH SEAMLESS WORLDWIDE INTERNET VPN CONNECTIVITY

Where remote locations can't always justify the cost of a regular IP network leased lines, or where leased lines cannot be delivered, we offer CorporateConnect Light. Designed to cover lower-end connectivity requirements of your non-critical remote VPN sites, it offers access to your most critical business applications by offering Internet traffic breakout and resiliency options for optimum performance.

ISSUES

Controlling Cost

You need a cost effective solution for your remote offices.

The right compromise

You need a great level of performance and feature set that might not be required in all locations.

Manageability and reach

You need a fully managed service with almost no coverage restriction for all your remote offices.

Flexibility

You need access technology and bandwidth availability for a maximum of flexibility including resiliency and service options.

SOLUTION

CorporateConnect Light offers secure and resilient IP connectivity anywhere to connect your remote or small sites to your VPN. It also provides resiliency and flexible service options.

Available in **200+ countries** the service uses primarily ADSL accesses, but can be customized to use any type. CorporateConnect Light is feature-rich and flexible:

- Air Back-Up supporting low to medium IP bandwidths.
- Local or distributed Internet browsing.
- Access to other SITA services such as ServiceNet, SITATEX or CUTE.

BENEFITS

- Cost effective access to the largest international IP network dedicated to the air transport industry.
- Optimizes time and resource management by out-tasking connectivity to SITA and offers coverage solutions to any remote location.
- Provides enriched customer service and user experience while simplifying the overall network management.
- Offers access to SITA's own services and industry-leading application providers through a more than 20 ServiceNets.
- Offers access to applications in the Orange Cloud Galerie.
- Integration of IP and Internet traffic in one connection and configuration.

HOW DOES IT WORK?

Over 1400+ CONNECTIONS, 180 CUSTOMERS

SOLUTION COMPONENTS

1. Customer edge router

Router at customer premises (CPE), provides customer LAN interface and a *pingable* device for service management

2. Locally sourced connection

Access link (ADSL or customized) between the customer's sites and the Internet

3. CorporateConnect IPSec protection over the Internet

In SITA countries, an IPSec tunnel is configured between the customer edge router and the IP Service Node (IPSN)

4. Backhaul to MPLS IP Network

Traffic is backhauled on MPLS IP Network to interface with customer headquarters

5. Internet breakout option

The routing option allows to improve Internet based application performance by extracting all Internet traffic at the ISP POP rather than backhauling to the MPLS IP Network hub site

6. Access to applications in the Orange Cloud Galerie

7. ServiceNet - access to ATI communities

CASE STUDY

A major European airline has adopted CorporateConnect Light for most of their remote sites, which are well integrated with the rest of the airline's CorporateConnect connections.

The customer uses the 6th CoS to allocate part of the bandwidth for their internet traffic and benefits from various access types and throughput with a preference for ADSL and some DIA (Dedicated Internet Access) and Wimax accesses.
